SO, YOU NEED TO GET ISO 27001 CERTIFIED.

If this is your first experience with the internationally recognised standard, you're probably wondering how to get started.

You may feel overwhelmed. That's understandable. It's a big standard with a lot of interconnected parts. Don't worry. We help organisations worldwide with the most practical, affordable path to achieving and maintaining their ISO 27001 certifications every day. It's what gets us up in the morning!

IN THIS GUIDE, WE'LL HELP YOU UNDERSTAND:

- The basics of ISO 27001:2022
- What a good Information Security Management System looks like
- How you can save time and budget by learning as you build

PART ONE

UNDERSTANDING ISO 27001

**CERTIFICATIONS TO ISO 27001
HAVE INCREASED BY**

450%

IN THE LAST TEN YEARS

WHAT IS ISO 27001?

ISO 27001 is the only genuinely global information security management standard, so naturally, it's one of the most widely sought-after.

It applies to every industry and sets out how to design, build and implement an Information Security Management System (ISMS) that can be independently certified for assurance purposes.

As the world's best-known standard on information security management, ISO 27001 helps organisations secure

their information assets – which is vital in today's increasingly digital world.

The standard is also regularly updated to ensure it meets the needs of the evolving information security threat landscape, with the most recent update taking place in 2022.

INTERNATIONALLY RECOGNISED

Internationally recognised best practice standard for information security management systems (ISMS)

COMPLETE FRAMEWORK

A framework to assist organisations in protecting the Confidentiality, Integrity and Availability of their most valuable assets

RISK-BASED APPROACH

Provides a risk-based approach to information security management

CONTINUOUS IMPROVEMENT PROCESS

A continuous improvement process (Plan/Do/Check/Act) to ensure your ISMS remains relevant

WHY IS ISO 27001 SO IMPORTANT?

The importance of good information security practices in businesses cannot be overstated in today's digital world. ISO 27001 offers you the best possible protection for your information assets. But it does so much more.

The IBM Data Breach Incident Report, in partnership with Ponemon, stated that the average global cost of a data breach reached USD \$4.35 million in 2022, and 83% of organisations reported suffering more than one security breach in the last 12 months. With the increasing frequency and cost of cyber threats and data breaches, organisations must prioritise protecting their sensitive information. This is where the ISO 27001 framework can offer considerable benefits in the information security armoury.

ISO 27001 is an international standard for

creating and maintaining an Information Security Management System (ISMS). The framework helps organisations evaluate their information security risks and implement mitigation controls. By using the ISO 27001 standard, organisations can improve their security posture, help enhance their brand reputation and improve customer trust creating a solid foundation for business growth.

Influential customers and security-focused supply chains increasingly view ISO 27001 certification as a baseline requirement for doing business. It's no longer a 'nice to have; it's an expectation.

FOUR KEY BUSINESS BENEFITS OF ISO 27001 CERTIFICATION

BEYOND TRUST

Today trust is no longer enough. You need certainty.

Trust is essential for any business. But in today's digital world, trust alone is not enough. Organisations need certainty in their information security practices. That's why more and more companies are choosing to get ISO 27001 certified, to demonstrate their ability to provide information security certainty to their customers and supply chains. In fact, certifications in ISO 27001 have risen by 450% over the last ten years.

As the only truly global information security standard, ISO 27001 is widely sought-after and applicable to all industries. It provides a framework for designing, building and implementing an Information Security Management System (ISMS) that can be independently certified for assurance purposes.

MORE THAN JUST CYBERSECURITY

ISO 27001 empowers organisations to achieve a robust risk management posture that aligns with the digitisation of modern business practices and accompanying threats

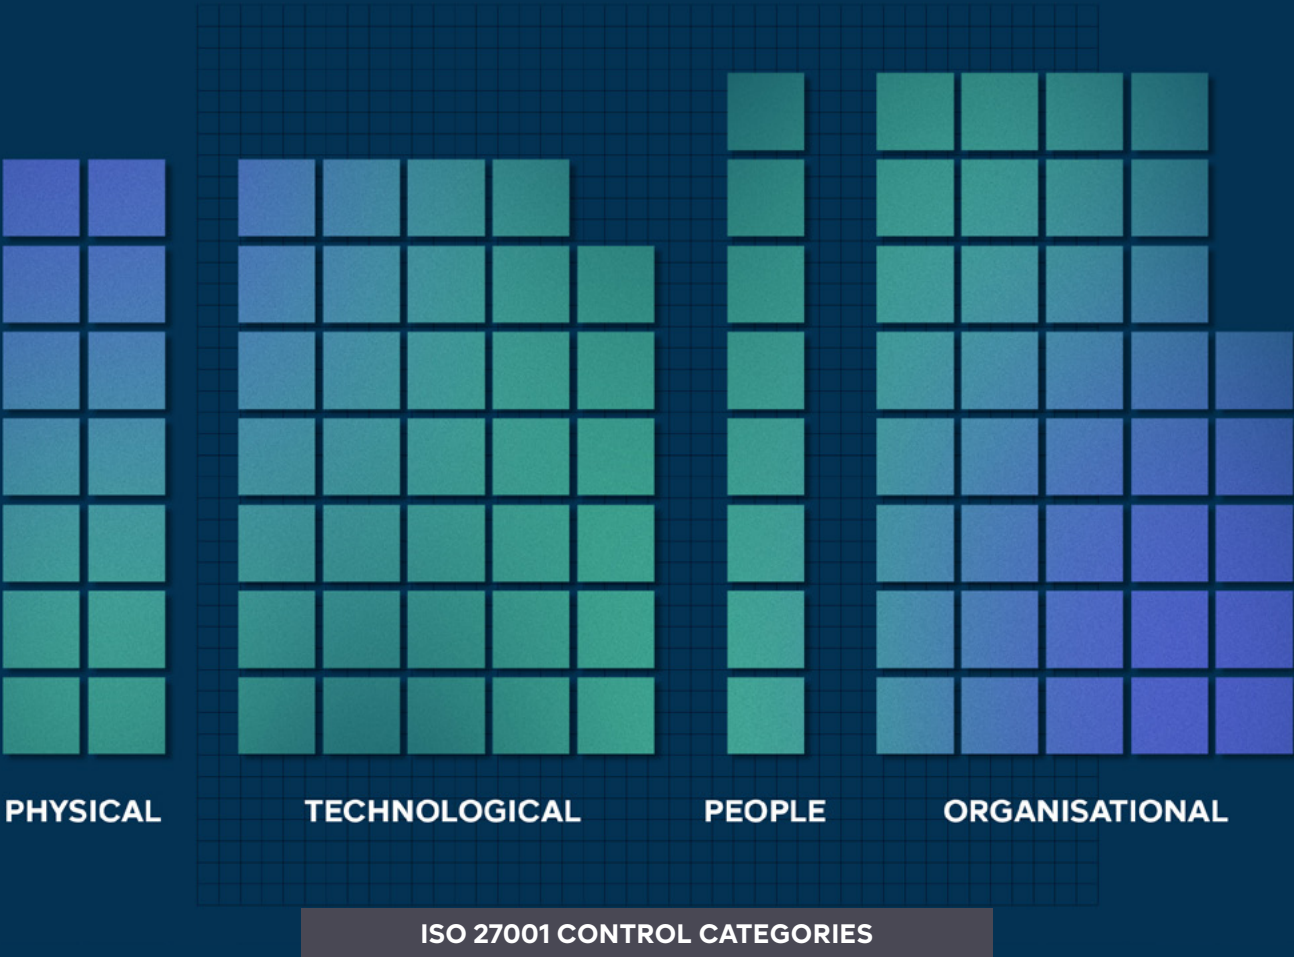

ISO 27001 is more than just a security standard, it's a management standard that provides a framework for identifying and managing information security risks. It covers information security, physical security, cybersecurity, business improvement, business development, and data privacy.

The standard delivers a risk-based framework in two parts: **Clauses and Annex A controls.**

Clauses 4-10 detail the scope, definitions, and requirements for implementing and maintaining an Information Security Management System (ISMS).

Annex A provides 93 objectives and controls, divided into four categories: Organisational, People, Physical and Technological. Each category has 5 attributes aligned to with the common terminology used in information security.

The 5 attributes are Control Types, Information Security Properties, Cybersecurity Properties, Operational Capabilities and Security Domains. These attributes are used to manage and mitigate risks to the organisation and its supply chain.

HOW DO YOU REACH ISO 27001 COMPLIANCE?

Achieving ISO 27001 certification is the ultimate way to demonstrate your commitment to information security.

By creating an Information Security Management System (ISMS) that follows the ISO 27001 standard, you can be sure that your organisation is taking all necessary measures to protect sensitive information.

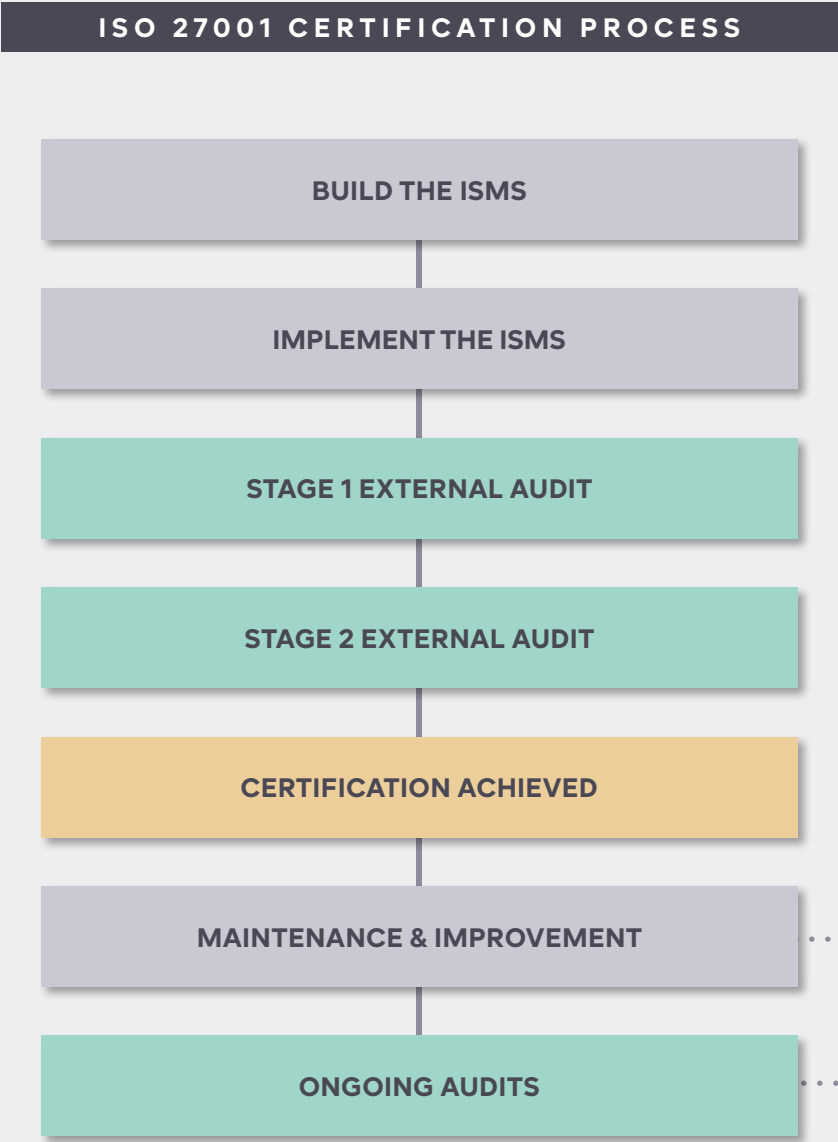

With our help, you'll pass through two rigorous external audits with ease, after which your auditor will recommend you for certification to the relevant accreditation body. Once certified, you'll enjoy the benefits of ISO 27001 for three years, with regular internal and external audits to ensure that you're always in compliance.

HOW LONG DOES IT TAKE?

We get asked this question a lot, and the truth is that it depends on two main factors – where you start and what approach you take.

In our recent State of Information Security Report, over 32% of organisations stated that it took them 1–5 years to achieve certification. Over 46%** of organisations use spreadsheets and toolkits to deliver the project.

In comparison, you can achieve success more quickly by using a pre-configured ISMS rather than by building your own, with the average time to complete sitting at less than six months (25%) and between 6-12 months (21%)*.

*STATS TAKEN FROM THE ISMS.ONLINE STATE OF INFORMATION SECURITY REPORT 2023 WITH A SAMPLE SIZE OF 500 PROFESSIONALS FROM SENIOR-LEVEL INFORMATION SECURITY POSITIONS

**STATS TAKEN FROM A POLL RAN DURING OUR SIMPLIFYING SECURITY WEBINAR, NOV 2022

WHY DO YOU NEED AN ISMS?

An ISMS is an essential part of the compliance and certification process. It's difficult to achieve compliance or certification without one.

Implementing an ISMS is essential for any organisation as it showcases its commitment to information security. An ISMS outlines the procedures for identifying and addressing potential threats or opportunities related to the organisation's information and assets. Fundamentally, an ISMS is an essential element of a company's overall risk management strategy and helps to ensure the highest possible standards of information security, data confidentiality and company success.

AVOID THE BIG THREE MISTAKES

For organisations looking to achieve ISO 27001 quickly and realise the operational, financial and business benefits that certification delivers, avoiding common pitfalls is essential.

DON'T RELY ON GAP ANALYSIS

Instead of relying on a traditional gap analysis, consider using a pre-configured service that can immediately address common gaps. This will save valuable time and effort and provide an immediate return on investment.

DON'T RELY ON A DOCUMENT TOOLKIT

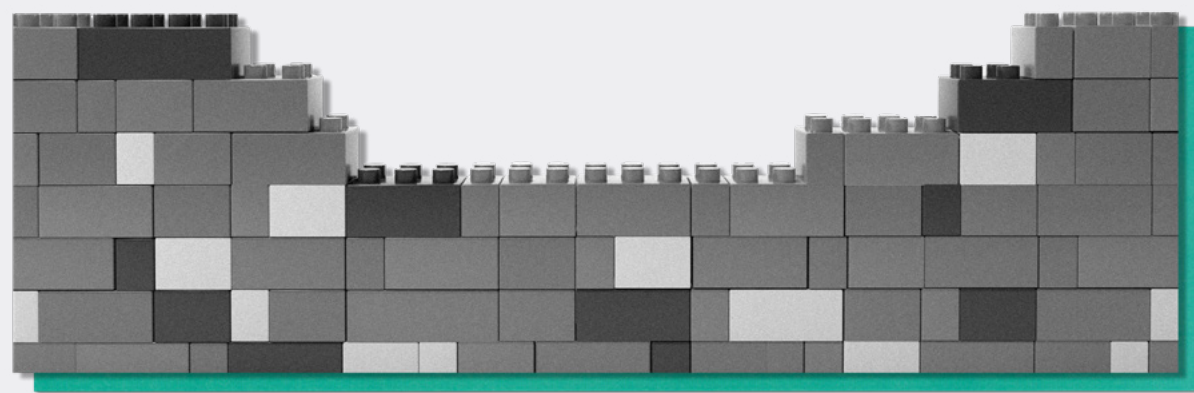

When managing your ISMS, avoid a basic toolkit approach. Instead, look for a solution that allows for easy creation, communication, control, and collaboration. This will ensure that you can approach ISO 27001 audits with confidence.

DON'T START FROM SCRATCH

Starting from scratch when building an ISMS is not the most efficient approach. It's similar to developing a bespoke sales or accounting system. Instead, look for existing off-the-shelf products that can save time, effort and budget.

THE BUILDING BLOCKS FOR AN EFFECTIVE ISMS

If your ISMS doesn't have these characteristics as an absolute baseline, you'll end up with a less effective platform and working much harder than you need to.

A SINGLE SOURCE OF TRUTH

Make sure you choose a single software solution that's futureproofed for your ongoing compliance needs.

WORKS WITH YOUR EXISTING SYSTEMS

Maximize efficiency by utilizing integrations to streamline data collection and seamlessly connect with the software you already use daily.

SECURITY CONFIDENCE

You'll hold some very sensitive information in your ISMS so avoid software solutions with weak security.

ALWAYS ACCESSIBLE

Your ISMS should be available to authorised parties securely, when and where they want it, with backup and support as needed.

EASY TO USE

Keep it simple – complicated management systems are costly to use and encourage noncompliance.

JOINED UP

Choose a solution with easy navigation and clear linking to help stakeholders find their way.

TRANSPARENT

Impress your auditor with an ISMS that shows your working as it evolves, making it easy to record and track changes.

COLLABORATIVE

Go for built in collaboration tools to avoid duplication and help to demonstrate continual improvement.

INSIGHTFUL AND ACTIONABLE

An ISMS with pre-configured reporting and reminders will help you and your stakeholders make better decisions.

AFFORDABLE

Prove your return on investment with an ISMS that's cost effective to implement and operate.

PART TWO

THE ISMS.ONLINE SOLUTION

SECURITY, SIMPLIFIED.

**Simplify your information security management with ISMS.online.
Built with everything you need to succeed with ease, and ready
to use straight out of the box – no training required!**

The ISMS.online software platform has been expertly designed and has all the necessary tools and features to help you achieve and maintain ISO 27001 certification. With our comprehensive range of tools and content, we can assist in streamlining your ISO 27001 journey and help you attain success in a shorter timeframe.

START AHEAD, STAY ON TOP

With Headstart your journey to ISO 27001 is 81% complete from the moment you first log in. Simply adopt the preconfigured HeadStart content, adapt anything you need and then add in any specific policies and controls to fit your business.

NO WRONG TURNS

Stay on track to certification with ARM, your Assured Results Method for ISO 27001 success. ARM takes all the ISO 27001 controls and breaks them down into 11 simple steps so you can achieve certification fast without any hassle or headaches.

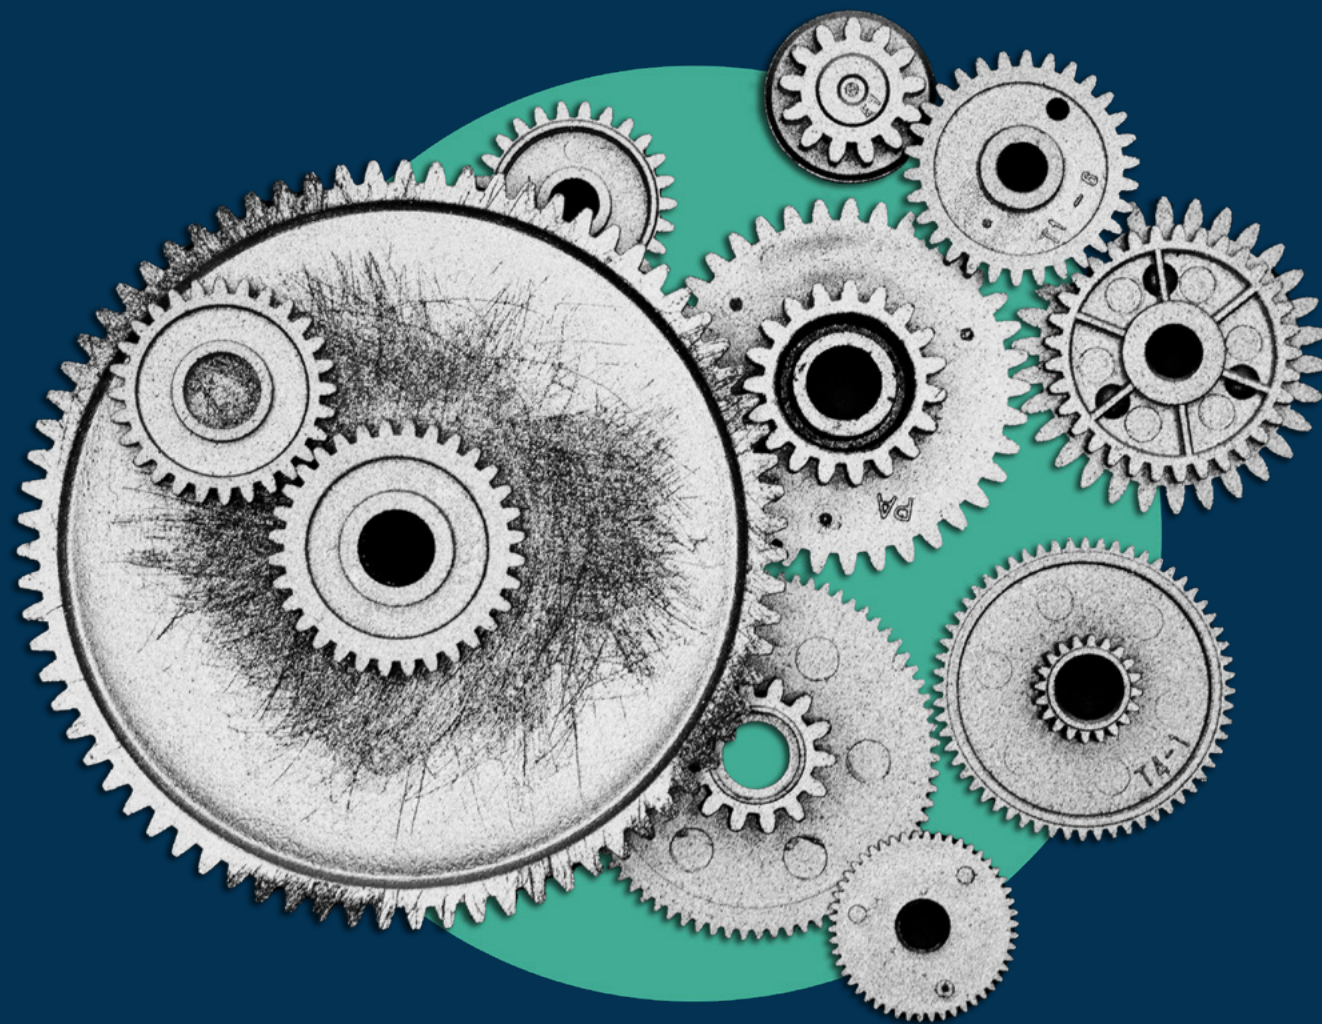

WORKS WITH YOUR EXISTING SYSTEMS

No need to double your workload. Connect with over 5,000 apps and leverage the benefits of automating compliance by integrating ISMS.online with your existing tech stack. Integrate instantly, remove manual tasks, and let ISMS.online do the work for you.

YOUR OWN ISO 27001 COACH

Virtual Coach is there when you need any guidance on how to approach any aspect of ISO 27001. No need to wait for help, get your answers straight away with Virtual Coach - your always-on guide to ISO 27001 certification.

FAST, SEAMLESS INTEGRATIONS

No need to double your workload. Integrate instantly with your existing setup, remove manual tasks, and let ISMS.online do the work for you.

Integrating compliance management tools into your business operations can streamline the compliance journey and achieve audit readiness.

With solutions like ISMS.online, businesses can go beyond simply outlining tasks and leverage the platform's automation capabilities to organise, remind, and capture corrective actions against each task continuously and in an audit-friendly manner.

By leveraging our Zapier integrations, you can connect with over 5,000 other software platforms, enabling you to simplify the compliance journey from start to audit-ready and beyond. Moreover, ISMS.online is built and supported by security and compliance experts, assuring that the platform can handle compliance challenges effectively. By automating compliance management, businesses can simplify their security and compliance posture and confidently meet regulatory requirements.

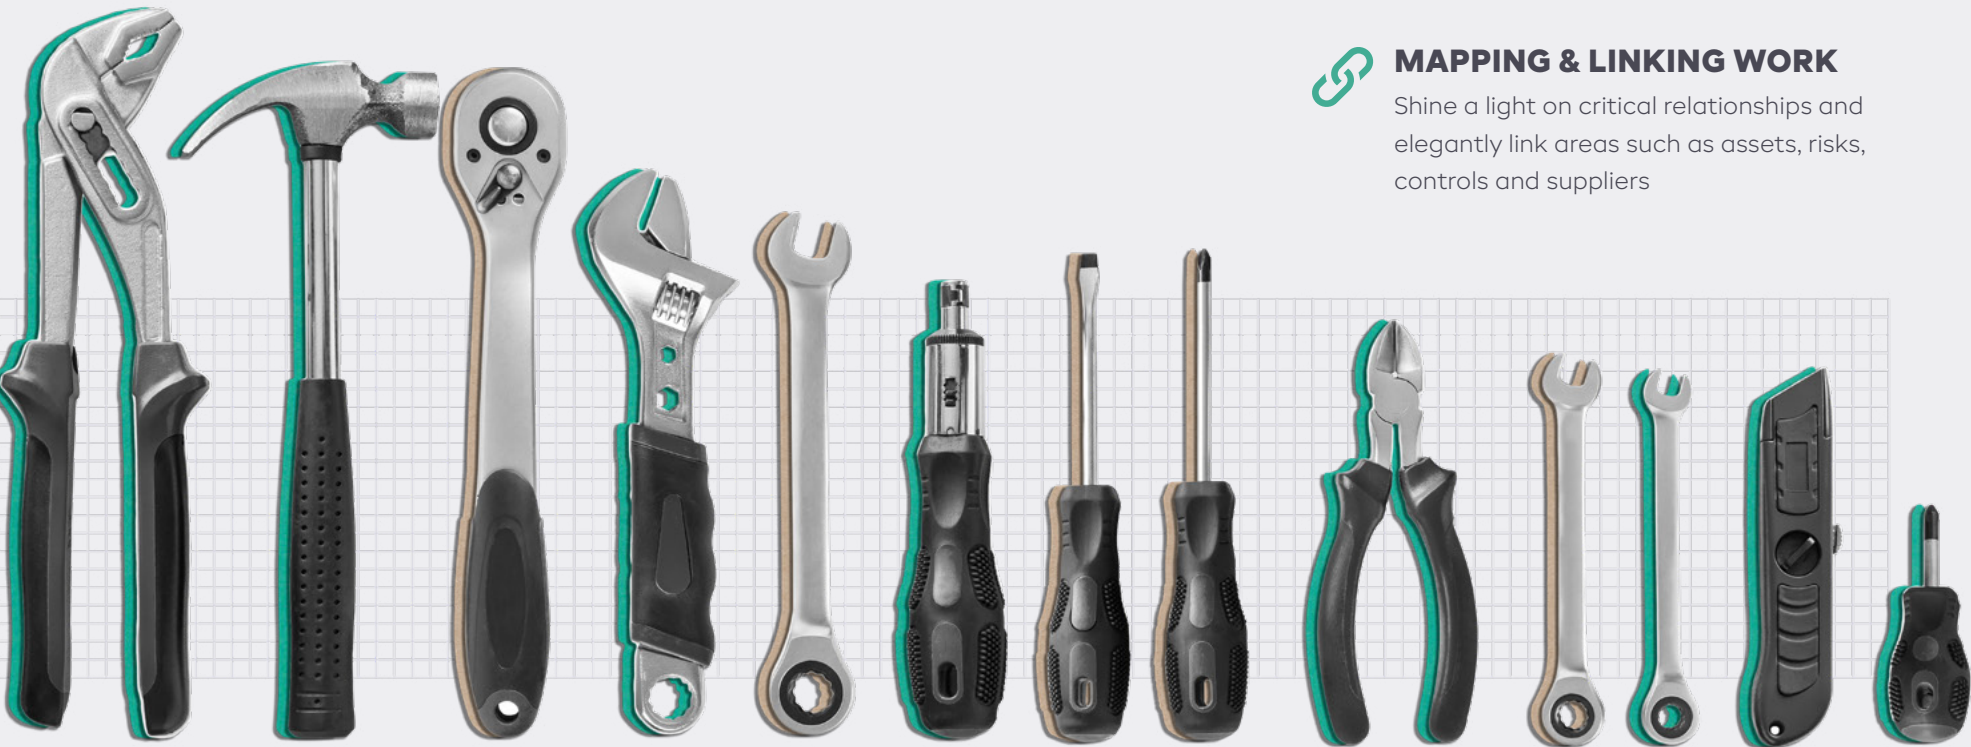

INTEGRATES WITH OVER 5,000 SYSTEMS INCLUDING:

YOUR COMPLETE COMPLIANCE TOOLKIT

ISMS.online features a dynamic and comprehensive toolset, built by experts to simplify every requirement of your ISMS build and maintenance.

If your ISMS is costing you time instead of saving it, it's time to move to ISMS.online. Every aspect of our simplified, secure, sustainable platform is designed to help you reclaim your time while giving you and your interested parties maximum assurance.

CREATE YOUR ISMS

-  **EASY ASSET MANAGEMENT**
Select assets from the Asset Bank and create your Asset Inventory with ease
-  **DYNAMIC RISK MANAGEMENT**
Effortlessly address threats & opportunities and dynamically report on performance
-  **PERFECT POLICIES & CONTROLS**
Easily collaborate, create and show you are on top of your documentation at all times
-  **FAST, SEAMLESS INTEGRATIONS**
Out of the box integrations with your other key business systems to simplify your compliance
-  **MAPPING & LINKING WORK**
Shine a light on critical relationships and elegantly link areas such as assets, risks, controls and suppliers

MANAGE YOUR ISMS

-  **STAFF COMPLIANCE ASSURANCE**
Engage staff, suppliers and others with dynamic end-to-end compliance at all times
-  **SUPPLY CHAIN MANAGEMENT**
Manage due diligence, contracts, contacts and relationships over their lifecycle
-  **AUDITS, ACTIONS & REVIEWS**
Reduce the effort and make light work of corrective actions, improvements, audits and management reviews
-  **INTERESTED PARTY MANAGEMENT**
Visually map and manage interested parties to ensure their needs are clearly addressed
-  **CLEAR REPORTING**
Make better decisions and show you are in control with dashboards, KPIs and related reporting

A SOLUTION THAT GROWS WITH YOUR BUSINESS

With ISMS.online you can integrate any management systems that share common elements.

Easily compatible standards include ISO 27001, ISO 27701, ISO 9001, ISO 22301 and ISO 14001 and we can also help you bring together many other ISO and non-ISO standards into your system. In fact, we currently support over 50 standards, frameworks and regulations.

If we don't already cover what you're looking for, we can quickly and easily add them to our simple, secure and sustainable platform.

THE ONLY TRULY GLOBAL INFORMATION SECURITY STANDARD

Manage the security of consumer data by implementing an information security management system.

A FRAMEWORK TO MANAGE AND PROTECT PERSONAL DATA

ISO 27701 provides guidelines for the implementation of a privacy information management system.

DATA PROTECTION AND PRIVACY IN THE EU AND EEA

GDPR is an EU law establishing rules for the collection, use, and storage of personal data and individual rights related to their personal information.

PROTECT AND MANAGE YOUR CUSTOMER DATA

SOC 2 outlines standards for the management of data with regards to: security, availability, processing integrity, confidentiality, and privacy.

ENSURE THE PRIVACY OF HEALTH RECORDS AND PERSONAL INFORMATION

HIPAA is a law that requires organisations managing protected health information to keep it secure and protected.

REDUCE CYBERSECURITY RISK AND PROTECT NETWORKS AND DATA

NIST is a US government standard that outlines the security requirements for protecting controlled unclassified information (CUI) in non-federal systems and organisations.
