

EVERYTHING YOU NEED  
TO KNOW ABOUT THE

# ISO 27001:2022 STANDARD UPDATE

WHAT THE NEW CONTROLS ARE,  
AND HOW THIS AFFECTS YOU.

## SUMMARY OF CHANGES

A new and improved version of ISO/IEC 27001 has just been published to address global cybersecurity challenges and improve digital trust.

The world's best-known standard on information security management helps organisations secure their information assets – which is vital in today's increasingly digital world.

We've summarised some of the fundamental changes to the standard below to help organisations identify the key areas they need to review to either achieve re-certification if they already hold ISO 27001:2013 or acquire brand new certification against the new ISO 27001:2022 version.

### 100% SUCCESS RATE WITH ISMS.ONLINE

We've been helping organisations achieve compliance since 2005 and have a 100% success rate for clients achieving ISO 27001 certification using our 'Assured Results Method' on our platform.

## ACHIEVING ISO 27001:2022

We are already helping companies with ISO 27001:2022 and recommend starting your certification now. However, it's important to know that it won't become applicable for around six months, and ISO 27001:2013 won't be retired for three years.

We have everything you need to implement an ISO 27001-compliant ISMS and achieve certification to the standard. We're ready to support you, from helping you understand the changes to checking the impact on your organisation, implementing, and finally transitioning your certification.
